PSRS

White Paper 1.1

Introduction

PSRS project is based on trc20 has some great Features secure, useful product based on Tron blockchain, it will include easy cryptocurrency payments integration, and even a digital arbitration system .
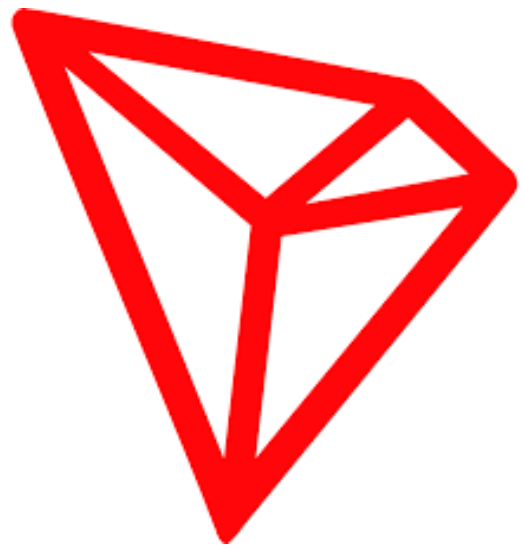

The issues of slow block confirmations and high gas fees need to be solved before we target mass adoption by mainstream users. And most importantly, it needs awesome user experience

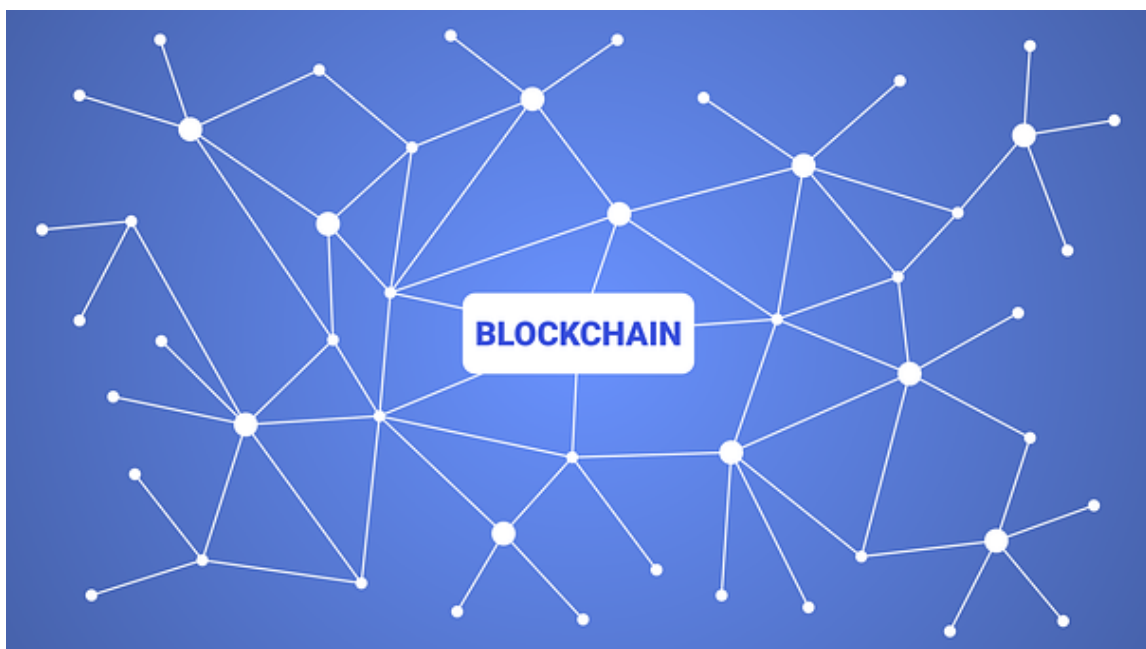

We aim to change that by simplifying the interaction between users and the decentralized world. We want to make interacting with the decentralized ecosystem so easy that anyone can do so without worrying about the complexity of the system.

WHY TRON?

• TRON is an ambitious project dedicated to the establishment of a truly decentralized Internet and its infrastructure. The TRON Protocol, one of the largest blockchain-based operating systems in the world, offersbase public blockchain support of high throughput, high scalability,and high availability for all decentralized applications in the TRON ecosystem.

• TRC10 vs. TRC20

•TRC-20

This token is used in smart contracts and contina more functionality than the TRC-10. The tokens are fully compatible with the ETH ERC-20. So for the developer who wish to use the multiple tokens for their dapps can benefit from this as well

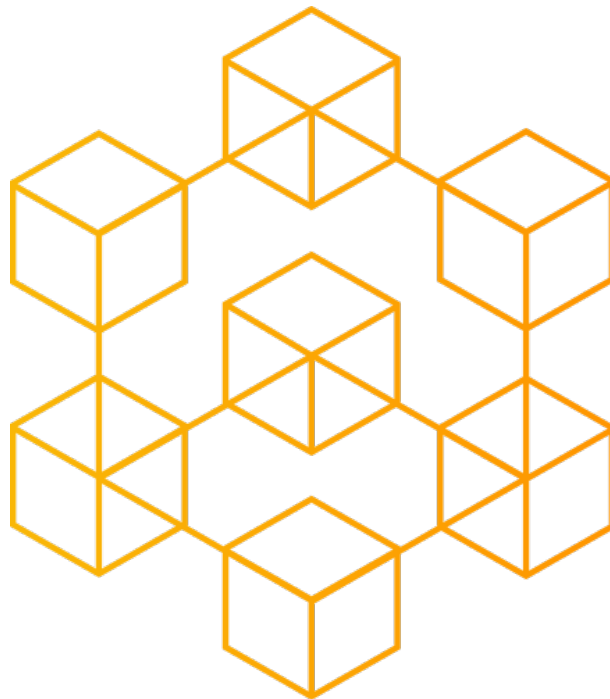

TRON (TRX) has a lot of potential on both crypto blockchain as well as in context of the smart contracts. Though the type of dapps that use it will decide it's future.

•TRC10

In past, TRC-10 tokens were on the ETH blockchain but later moved to TRX own blockchain. It is very easy to create and almost every popular desktop wallet these days have support for TRC-10 out of the box. It is also used in the popular Bittorrent protocol.

OUR AIM

our team is up to build a secure, useful, & easy to - use product based on private blockchain. It will include easy cryptocurrency payments integration, and even a digital arbitration system.At the end, our aims to integrate all companies, employees, and business assets into a unified blockchain ecosystem, which will make businesstruly efficient, transparent, and reliable.

Each blockchain platform has its own native token. Such tokens serve as units of payment for the transaction fee incurred on the respective blockchain. Besides, they may also be designated as rewards for network participants who contribute to upholding the integrity, security and availability of the blockchains.

ABOUT PSRS TOKEN

• Token Name: PSRS

 • Token Ticker: PSRS

• Token Platform: Tron Blockcain

• Token Standard: Trc20

• Max. Supply (Hard Cap): 10,000,000

Roadmap

• Hotbit(Soon)

•Bololex(Soon)
